NVIDIA DGX SuperPOD™ brings together leadership-class infrastructure with agile, scalable performance for the most challenging AI and high performance computing (HPC) workloads. DGX SuperPOD delivers a full-service experience with industry-proven results in weeks instead of months. It’s not just a collection of hardware, but a full-stack data center platform that includes industry-leading computing, storage, networking, software, and infrastructure management optimized to work together and provide maximum performance at scale. To make it even easier, DGX SuperPOD comes with a white-glove implementation service that ensures smooth deployment and operation.

Solving the Challenge of Large-Scale, Multi-Node AI Infrastructure

NVIDIA DGX SuperPOD is designed to deliver unmatched levels of multi-system training. Traditional large compute clusters are constrained by the complexity of scaling inter-GPU communications as configurations become larger and computation is parallelized over more and more nodes. This results in diminishing performance returns. DGX SuperPOD solves this scaling problem by optimizing every component in the system for the unique demands of multi-node AI infrastructure. Using this architecture, NVIDIA created one of the fastest and most energy-efficient supercomputers in the world, Selene, which perenially makes the top tier of the TOP500 and Green500 lists\(^1\) and set multiple MLPerf benchmark records.\(^2\)

Infrastructure Management powered by NVIDIA Base Command

NVIDIA Base Command powers every DGX system, enabling organizations to leverage the best of NVIDIA software innovation. Enterprises can unleash the full potential of their DGX investment with a proven platform that includes enterprise-grade orchestration and cluster management, libraries that accelerate compute, storage and network infrastructure, and an operating system optimized for AI workloads. Additionally, DGX systems include NVIDIA AI Enterprise, offering a suite of software optimized to streamline AI development and deployment.

#### NVIDIA DGX SUPERPOD

**HARDWARE**
- NVIDIA DGX H100 or DGX A100 systems
- NVIDIA Networking
- High performance storage

**SOFTWARE**
- NVIDIA AI Enterprise
- NVIDIA Base Command Platform
- NVIDIA Base Command

**LIFECYCLE SERVICES**\(^*\)
- Plan/Deploy**
  - Capacity planning
  - Data center design
  - Performance projection
  - Site eval/prep
  - Installation
  - Post-install testing
  - Provisioning/management

- Train/Optimize
  - Application perf testing
  - Site documentation package
  - User/DevOps training
  - Workload-based NVIDIA Deep Learning Institute training
  - Custom system runbook
  - Hand-over session

\(^*\) A combination of NVIDIA and partner services
\(^**\) Deployed on-prem or in a DGX-Ready Data Center
DGX SuperPOD leverages the NVIDIA Base Command Platform software service for enterprise-class AI training. Base Command Platform provides centralized control of the AI training process from end-to-end, including resource sharing, job scheduling, and data set management, using an intuitive graphical user interface (UI), a command line interface, and integrated monitoring and reporting dashboards. Base Command Platform provides a single pane-of-glass view into your AI training projects on your on-premises DGX SuperPOD.

**NVIDIA DGX SuperPOD, Tested and Proven**

DGX SuperPOD isn’t just AI infrastructure done the NVIDIA way—it’s a predictable solution that meets the performance and reliability needs of enterprises. NVIDIA does all the leg work, testing DGX SuperPOD extensively and pushing it to the farthest limits with real-world enterprise AI workloads, so you don’t have to worry about application performance.

**A Complete Lifecycle of Expertise, Backed by NVIDIA**

More than an architecture design, enterprises need a faster path to making accelerated computing infrastructure operationally useful to their businesses. They need an implementation experience that’s turnkey, fast, and optimized around their IT environment—so data scientists can be up and running on day one—and continues to improve over time. With NVIDIA DGX SuperPOD, enterprises benefit from full lifecycle professional services spanning everything from install to infrastructure management to scaling workloads to streamlined production AI. And true to the promise of DGX SuperPOD, it continually gets better. NVIDIA engineers are continuously innovating and updating the software that powers DGX SuperPOD so every system runs faster than the day it was commissioned.

**High-Performance Infrastructure in a Single Solution—Optimized for AI**

NVIDIA DGX SuperPOD brings together a design-optimized combination of AI computing, network fabric, storage, and software. Its compute foundation is built on NVIDIA DGX H100 or DGX A100 systems, which provide unprecedented compute density, performance, and flexibility. NVIDIA DGX H100 and DGX A100 systems feature the world’s most advanced accelerators, enabling enterprises to consolidate training, inference, and analytics in a unified, easy-to-deploy AI infrastructure.
DGX SuperPOD’s high-performance network fabric leverages ultra-low latency NVIDIA InfiniBand networking. This powerful technology delivers the highest performance and scalability for the largest AI workloads, with reduced operational costs and infrastructure complexity.

AI supercomputers also require extremely high-speed storage to run at peak capacity. In a well-architected system, storage solutions need to handle a variety of data types—such as text, tabular data, audio, and video—in parallel—with unwavering performance. Certified storage for NVIDIA DGX SuperPOD is carefully selected and tested for the unique demands of AI workloads and then optimized for each environment to ensure success.

The Experience that Fuels AI Success

DGX SuperPOD incorporates NVIDIA’s unmatched experience in designing and using AI supercomputers, driven by thousands of NVIDIA researchers and engineers who use this platform to bring new innovations to market. NVIDIA DGX SuperPOD delivers the turnkey data center solution for businesses focused on innovation instead of infrastructure, designed, deployed, and managed the way NVIDIA does AI.
